Position of CFS	• Information on product distribution outside France is not available from the websites of the Rappel Conso and Préfète de l'Hérault of France. The Centre for Food Safety (CFS) is investigating whether the affected products have been imported to Hong Kong. • Acquisition of the products through international travel cannot be excluded. • Paralytic Shellfish Poisoning (PSP) toxin can cause symptoms such as numbness of mouth and limbs and gastrointestinal discomfort. In severe cases, paralysis with respiratory arrest and even death may occur. This natural toxin is sometimes found in bi-valve shellfish. It is heat-stable and cannot be destroyed through cooking. • Consumers should discard the products and not consume them. • CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
