Heading	The U.S. Food and Drug Administration (FDA)– Recall of 'PediaSmart® Dairy Vanilla' in Canada and the US by Nature's One due to possible under-delivery of nutrition using included scoop.
The incident	<p>The FDA issued a notice regarding a recall of three lots of PediaSmart® Dairy Vanilla complete nutrition beverage powder packaged in 12.7 ounce cans, which bear the lot numbers located on the bottom of the can, in Canada and the U.S. by Nature's One. This product is generally consumed by individuals between the ages of 13 months – 13 years old. The result of measuring product with the smaller scoop is that only 60% of the labeled nutritional content will be consumed per serving. 'PediaSmart® Dairy Vanilla' in Canada and the US by Nature's One due to possible under-delivery of nutrition using included scoop.</p> <p>Details of products being recalled are listed in the FDA website.</p>

Position of CFS	<ul style="list-style-type: none"> Information on product distribution outside Canada and the US is not available from the FDA website. CFS is investigating whether the affected batches have been imported to Hong Kong and is contacting the U.S. authority for further information. Acquisition of the products through online purchase or international travel cannot be excluded. Because not all of the cans contain the smaller scoop, if you have any of the product potentially containing the smaller scoop, please look at the bottom of the scoop. If the scoop has the number 32 cc printed on it, the scoop size is correct and you can continue to use the product knowing that the correct levels of nutrients will be delivered when following label mixing directions using the scoop. However, if your scoop has a 20 cc
