Position of CFS	<ul style="list-style-type: none"> • Information on product distribution outside the US is not available from the captioned websites. • CFS is investigating whether the affected batches have been imported to Hong Kong and is contacting the U.S. authority for further information. • Acquisition of the products through online purchase or international travel cannot be excluded. • People contract <i>E. coli</i>, which is a gastro-intestinal infection, through consumption of contaminated water or undercooked and contaminated foods. Intestinal bleeding and serious complications such as hemolytic uraemic syndrome (HUS) may also develop in some people. Moreover, due to poor personal hygiene, person-to-person transmission of this pathogen is possible through oral-faecal route. <i>E. coli</i> cannot survive under high temperature and can be killed by thorough cooking. • CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary. • Investigation by CFS is ongoing.
