Position of CFS	<ul style="list-style-type: none">• Information on product distribution outside Taiwan is not available from the captioned website. CFS is contacting the U.S. authority for further information. Our investigation revealed that one of the importers has imported a batch with the same expiry date but not from the importer concerned in Taiwan. We sampled the batch concerned imported to Hong Kong and aflatoxin was not detected.• For the sake of prudence, CFS has collected 5 peanut samples (including Planter brand products) at retail outlets for testing of aflatoxin. No aflatoxin was detected in any samples collected.• CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.• To avoid excessive intake of mycotoxins, the spokesman advised people to maintain a balanced and varied diet to minimise the risk from a small range of food items, and to avoid consuming food that looks mouldy or damaged.
