been imported to Hong Kong and is contacting the relevant authority for further information. Preliminary investigation did

not identify local sale or import of the affected product.

食物事故報表 Food Incident Post

- Acquisition of the product through online purchase or international travel cannot be excluded.
- Consumers should discard the product and not consume it.
- CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
- Investigation by CFS is ongoing.
- People contract E. coli, which is a gastro-intestinal infection, through consumption of contaminated water or undercooked and contaminated foods. Intestinal bleeding and serious complications such as haemolytic uraemic syndrome (HUS) may also develop in some people. Moreover, due to poor personal hygiene, person-to-person transmission of this pathogen is possible through oral-faecal route. E. coli cannot survive under high temperature and can be killed by thorough cooking.
