

Food Safety Report for June 2014

Centre for Food Safety
Food and Environmental
Hygiene Department

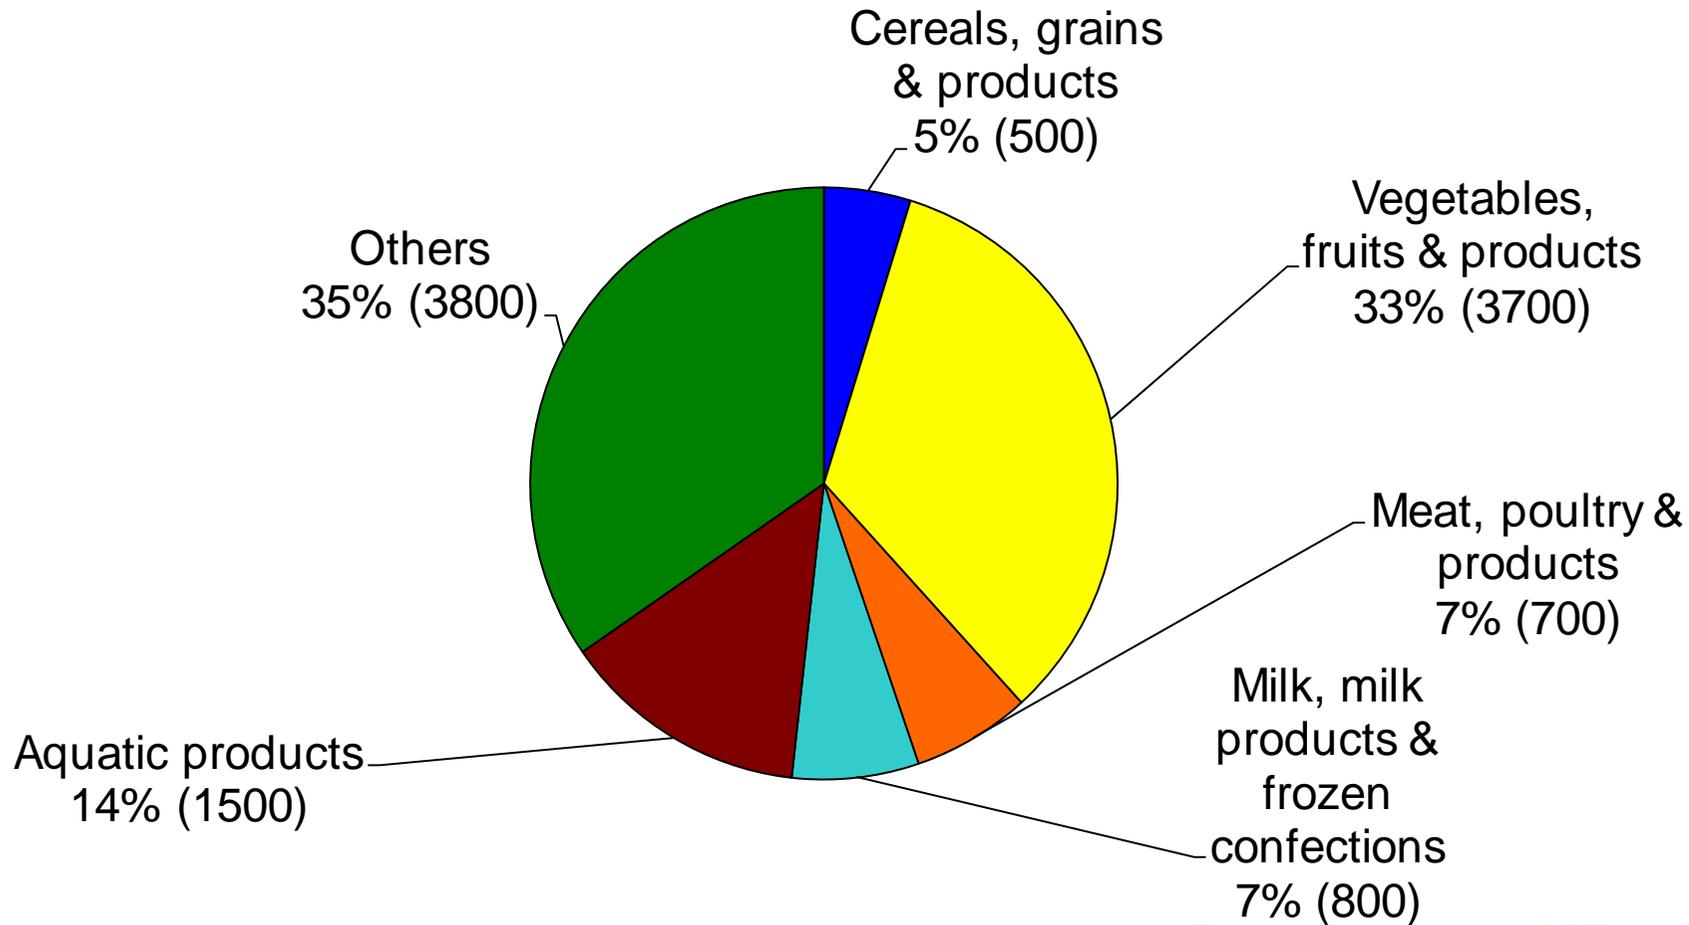

July 2014

Introduction

- The Centre for Food Safety (CFS) adopts the three-tier food surveillance approach, i.e. routine food surveillance, targeted food surveillance and seasonal food surveillance to collect samples at import, wholesale and retail levels for microbiological, chemical and radiological tests.
- CFS releases the “Food Safety Report” every month so as to allow the public to obtain the latest food safety information timely.
- This presentation gives an account of the food surveillance sample result analyses in June 2014.

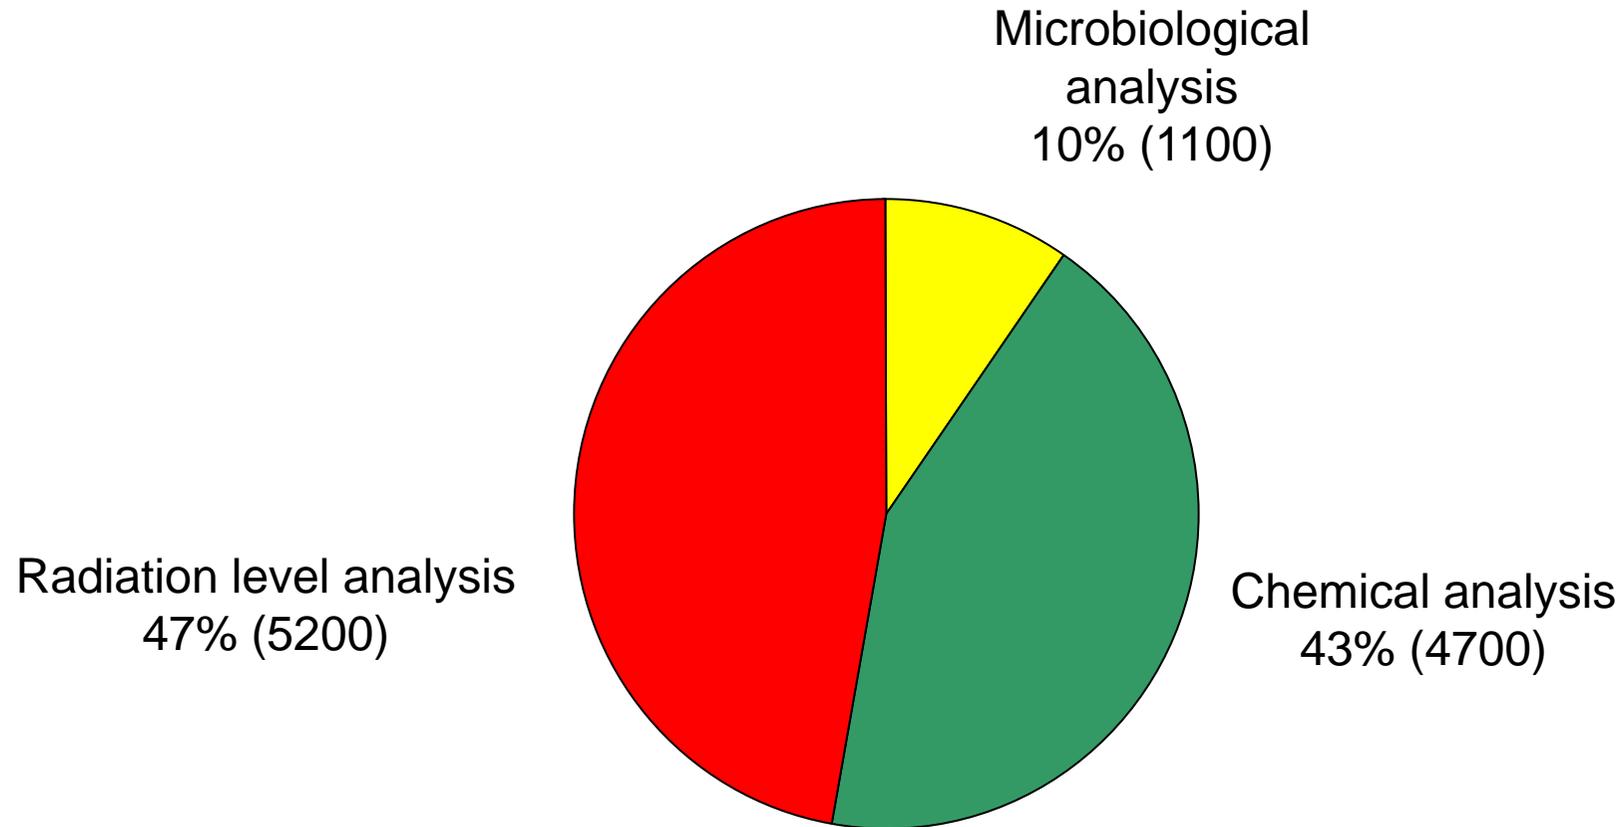

Types of food tested

- About 10900 food samples of various food groups were tested.

N.B.: Figures in brackets are rounded and may not add up to total due to rounding.

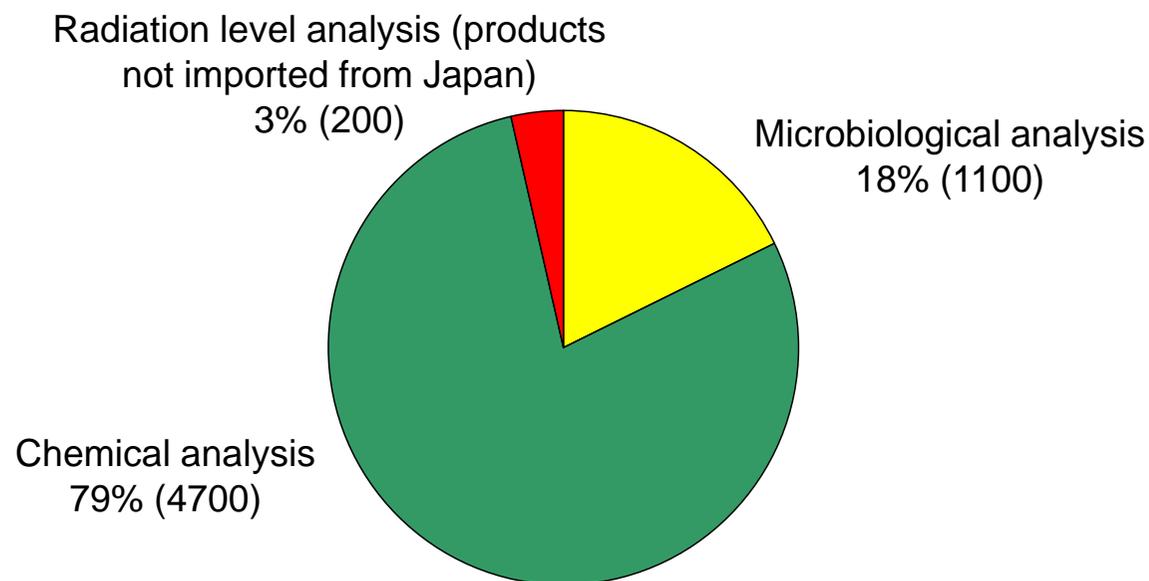

Types of testing

N.B.: Figures in brackets are rounded and may not add up to total due to rounding.

Types of testing (Cont'd)

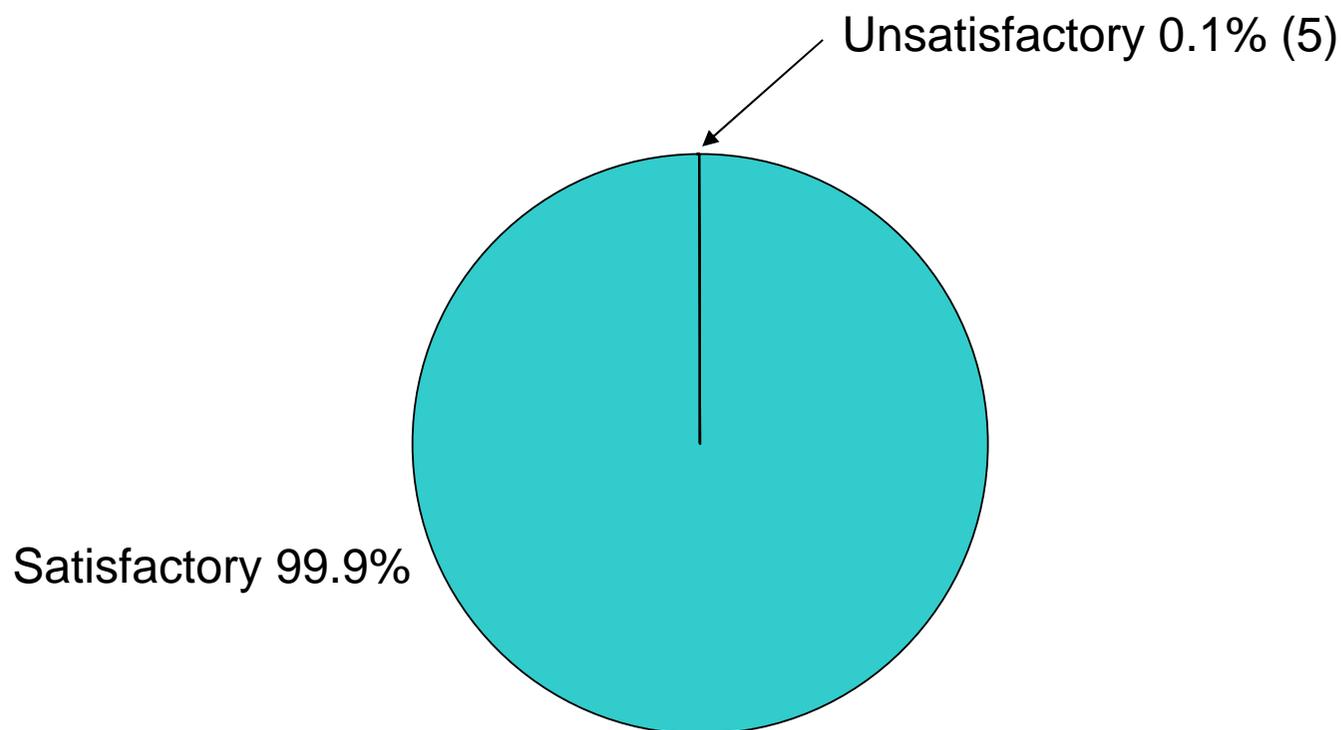

- In response to the Fukushima nuclear power plant incident in Japan, CFS has stepped up surveillance of imported Japanese food for testing of radiation level from mid-March 2011. In June 2014, all the radiation level test results of about 4900 samples were satisfactory.
- Except that, types of testing for the remaining food surveillance samples are distributed as follows:

N.B.: Figures in brackets are rounded and may not add up to total due to rounding.

Overall results

- There were 5 unsatisfactory samples. Overall satisfactory rate was 99.9%.

Unsatisfactory samples

Food Group	No. of Samples Tested	No. of Unsatisfactory Samples
Vegetables, fruits & products	3700	0
Meat, poultry & products	700	1
Aquatic & related products	1500	1
Milk, milk products & frozen confections	800	1
Cereal, grains & products	500	1
Others	3800	1
Total	10900	5

N.B.: Figures may not add up to total due to rounding.

1. Vegetables, fruits & products

- About 3700 samples were collected. They included various kinds of fresh vegetables, fruits and legumes, preserved vegetables and pickled fruits, dried vegetables and ready-to-eat vegetables.

- Analysis included:

- Microbiological tests

- Chemical tests such as:

- Pesticides (e.g. methamidophos, isocarbophos, DDT)
- Metallic contamination
- Preservatives

- Radiation level tests

- All samples were satisfactory.

2. Meat, poultry & products

- About 700 samples were collected. They included fresh, chilled and frozen pork, beef and poultry, ready-to-eat dishes of meat and poultry served at food premises, the meat and poultry made products such as Chinese preserved meat, sausage and ham.
- Analysis included:
 - Microbiological tests
 - Chemical tests (e.g. preservatives, veterinary drug residues and colouring matters)
 - Radiation level tests
- Overall satisfactory rate was 99.9%. Other than 1 unsatisfactory fresh beef sample announced earlier in June, remaining samples were all satisfactory.

3. Aquatic and related products

- About 1500 samples were collected. They generally covered fish, shellfish, shrimp/prawn, crab, squid and their products.
- Analysis included:
 - Microbiological tests
 - Chemical tests (e.g. preservatives, metallic contamination, toxins and veterinary drug residues)
 - Radiation level tests
- Overall satisfactory rate was 99.9%, with 1 unsatisfactory sample in this report.

3. Aquatic products (Cont'd)

Pathogens

- 1 unsatisfactory sample:

Sample	Unsatisfactory testing item	Result
1 lo shui cuttlefish sample	<i>Salmonella</i>	Detected in 25g of food ⁽¹⁾

(1) Exceeded the Microbiological Guidelines for Ready-to-eat Food's limit.

Other tests

- Samples for other tests were satisfactory.

4. Milk, milk products & frozen confections

- About 800 samples were tested. They included ice-cream, cheese, milk and milk products.
- Analysis included:
 - Microbiological tests (total bacterial count, pathogens e.g. Salmonella and Staphylococcus aureus)
 - Chemical tests (e.g. melamine, preservatives, veterinary drug residues and colouring matters)
 - Radiation level tests
- Overall satisfactory rate was 99.9%, with 1 unsatisfactory sample in this report.

4. Milk, milk products & frozen confections (Cont'd)

Composition

- 1 unsatisfactory sample:

Sample	Unsatisfactory testing item	Result
1 milk sample	Milk fat	2.88% ⁽¹⁾

(1) Below the legal requirement of containing not less than 3.25% milk fat.

Other tests

- Samples for other tests were satisfactory.

5. Cereal, grains and products

- About 500 samples included rice/noodles, flour, bread and breakfast cereal.
- Analysis included:
 - Microbiological tests
 - Chemical tests (e.g. preservatives, pesticides and metallic contamination)
 - Radiation level tests
- Overall satisfactory rate was 99.8%, with 1 unsatisfactory sample in this report.

5. Cereal, grains and products (Cont'd)

Preservatives

- 1 unsatisfactory sample:

Sample	Unsatisfactory testing item	Result
1 rice vermicelli sample	Sulphur dioxide	44ppm ⁽¹⁾⁽²⁾

(1) Exceeded the legal limit of 20ppm.

(2) The preservative was not listed on the food label of the sample either.

Other tests

- Samples for other tests were satisfactory.

6. Other food commodities

- About 3800 food samples were collected. Types included:

Mixed dishes <ul style="list-style-type: none"> Pathogens and preservatives 	Condiments and sauces <ul style="list-style-type: none"> Preservatives and colouring matters
Dim Sum <ul style="list-style-type: none"> Pathogens and preservatives 	Snack <ul style="list-style-type: none"> Pathogens, anti-oxidants and colouring matters
Beverages <ul style="list-style-type: none"> Microbiological tests, preservatives and colouring matters 	Eggs and egg products <ul style="list-style-type: none"> Colouring matters and melamine
Sushi and sashimi <ul style="list-style-type: none"> Microbiological tests 	Others <ul style="list-style-type: none"> Plasticisers, preservatives and colouring matters, polycyclic aromatic hydrocarbons
Sugar and sweets <ul style="list-style-type: none"> Preservatives, colouring matters and metallic contamination 	

- Overall satisfactory rate was 99.9%. Except for the beverage sample which was found to contain brominated vegetable oil announced earlier in June, remaining samples were satisfactory.

Follow-up actions

- Warned the trade concerned of the test results, marked and sealed the imported food concerned and instructed the vendors concerned to stop sale of incriminated food item.
- Traced source of food items in question.
- Take follow-up samples for analysis.
- Prosecution action will also be taken if there is sufficient evidence.

Advice for trade and consumers

- The trade should ensure that their food is fit for consumption and meet legal requirements.
- The trade should source food from reliable suppliers and maintain a good recording system in accordance with the Food Safety Ordinance to allow source tracing if needed.
- Consumers should patronize reliable premises for buying food. They should also maintain balanced diet to minimize food risk.
