

Latest issue of E-News (3/4/2024):

(1) Careful Planning for Food Delivery Services

At festive seasons, many people would order food delivery services for parties at offices and homes for the sake of flexibility and convenience. However, to safeguard our health, we must be careful and pay special attention to food safety measures when arranging these services.

Please click into the webpage for related food safety advice:

(2) Beware of the Inherent Risks of Raw Oysters

Oysters for raw consumption are a high-risk food as there is no heat treatment to kill pathogens before eating. Besides those sold alive, raw oysters available in the local market are often pre-shucked in either frozen or chilled forms. If not handled properly, it can lead to bacterial contamination and deterioration of the shellfish.

Pregnant women, infants and young children, the elderly and people with weakened immunity should avoid consuming raw or undercooked oysters.
