contacting the relevant authority for further information. Investigation so far did not identify local sale or import of the affected products.

- Acquisition of the products through online purchase or international travel cannot be excluded.
- Lead has no essential function in man, but has a number of adverse effects. Short term exposure to high levels of lead can cause abdominal pain, vomiting and anaemia, whereas chronic low-level exposure can cause retarded cognitive and intellectual development in children. Infant, young children and foetus are more sensitive to toxic effects of lead, especially in regard to the damages to their central nervous system.
- Consumers should discard the products and not consume them.
- CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
- Investigation by CFS is ongoing.
