Heading	The Ministry for Primary Industry (MPI) of New Zealand – A public health warning on shellfish biotoxin alert for Northland and East Cape in New Zealand due to presence of levels of paralytic shellfish toxins over the safe limit set by MPI.
The incident	<p>The MPI of New Zealand issued a public health warning on shellfish biotoxin alert for Northland and East Cape in New Zealand due to presence of levels of paralytic shellfish toxins over the safe limit set by MPI.</p> <p>Affected products:</p> <ul style="list-style-type: none"> ● Mussels, oysters, tuatua, pipi, toheroa, cockles, scallops, catseyes, kina (sea urchin) and all other bivalve shellfish. ● Pāua, crab and crayfish may still be eaten if the gut has been completely removed prior to cooking, as toxins accumulate in the gut. If the gut is not removed, its contents could contaminate the meat during the cooking process. <p>Details of products being affected are listed in the MPI website.</p>

Position of CFS	<ul style="list-style-type: none"> • According to the information of MPI, commercially harvested shellfish – sold in shops and supermarkets, or exported – is subject to strict water and flesh monitoring programmes by MPI. • Acquisition of the products through international travel cannot be excluded. • Paralytic Shellfish Poisoning (PSP) toxin can cause symptoms such as numbness of mouth and limbs and gastrointestinal discomfort. In severe cases, paralysis with respiratory arrest and even death may occur. This natural toxin is sometimes found in bi-valve shellfish. It is heat-stable and cannot be

destroyed through cooking.

- Consumers should discard the products and not consume them.
- CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
