Position of CFS	<ul style="list-style-type: none"> • Information on product distribution outside the US is not available from the website of the FDA. The Centre for Food Safety (CFS) is investigating whether the affected products have been imported to Hong Kong and is contacting the relevant authority for further information. Preliminary

食物事故報表 Food Incident Post

investigation did not identify local sale or import of the affected products.

- Acquisition of the products through online purchase or international travel cannot be excluded.
- The trade should stop using or selling the products concerned immediately should they possess them.
- Consumers should discard the products and not consume them should they possess them.
- CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
- Investigation by CFS is ongoing.
- Norovirus, a virus smaller than bacteria, is a major cause of non-bacterial food poisoning resulting in infectious gastro-intestinal diseases. Symptoms include nausea, vomiting, diarrhoea and abdominal cramps etc. Norovirus mainly exists in dirty water. Shellfish living in polluted waters or vegetables irrigated with water from polluted origins are easily contaminated.
