international travel cannot be excluded.

- Consumers should discard the product and not consume it.
- CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
- Investigation by CFS is ongoing.
- Diarrhetic shellfish toxins (DSTs) are naturally occurring marine toxins produced by algae. Shellfish are filter feeders. Especially during or shortly after algal blooms, shellfish may accumulate DSTs reaching a level that can make people sick. The main symptoms of DSP are diarrhoea, nausea, vomiting and abdominal pain, which usually occur between 30 minutes and a few hours after consuming contaminated shellfish. Affected persons usually recover within 2-3 days.
