Position of CFS	Information on product distribution outside France is not available from the website of the Rappel Conso of France. The Centre for Food Safety (CFS) is investigating whether the affected products have been imported to Hong Kong and is contacting the relevant authority for further information. Preliminary investigation did not identify local sale or import of			

食物事故報表 Food Incident Post

the affected products.

- Acquisition of the products through online purchase or international travel cannot be excluded.
- Consumers should discard the products and not consume them.
- CFS will remain vigilant and monitor for any new development and take appropriate actions when necessary.
- Investigation by CFS is ongoing.
- Some strains of *E. coli* can cause diseases through the production of a toxin called Shiga toxin. These strains are called STEC. STEC infection is transmitted by faecal-oral route through contaminated food and water, or direct contact with STEC carrying animals. Moreover, due to poor personal hygiene, person-to-person transmission of this pathogen is possible through oral-faecal route. Symptoms of STEC infection include abdominal pain and watery diarrhoea that may in some cases progress to bloody diarrhoea. Fever and vomiting may also occur. Intestinal bleeding and serious complications such as haemolytic uraemic syndrome may also develop in some people. *E. coli*, including STEC, cannot survive under high temperature and can be killed by thorough cooking.
